

6. Emily is a Primary seven girl. Her parents are all tall but she is evidently shorter than all her siblings. She woke up one night to find her beddings with stains of blood. She has never heard of a similar experience in any of her sisters. She is afraid this maybe related to her size. As a biology student.
- a) Explain to Emily the possible causes of her size. Use genetic symbols where necessary.
 - b) Explain to her the changes that are occurring in her body that brought about the blood stains.
 - c) Advise Emily on ways to cope up with these changes occurring in her body
